

### Specifications for Street Shed Expansion

This expansion is going to be a shell temporarily and may end up being completed over two fiscal years. The amount budgeted for this fiscal year is \$40,000.00, and all bids must remain within the \$40,000.00 limit.

The Expansion will be attached to the existing Street Shed Building and will run east and west at the south end of the existing structure. The existing structure is 50' in length with 12' ceilings and runs north to south with the doors facing east. The new structure will be 30' wide by 100' in length, running east to west with the doors facing to the north. The following requirements are noted below:

Shed: 100' x 30' with 14' height

Material: steel exterior with wood frame on 10" centers

Entrance door: 36" door, placement to be determined

Bay Doors: 2 doors with 12' height, 15' width, facing north

Moisture Barrier: Drip guards required on interior ceilings

Interior Ceiling: install as high as possible to allow large equipment

Flexibility is required during construction to allow for change orders which may be deemed necessary for normal street department operations.
